

Education plan

for

International Master's Programme in Performance Studies
Internationellt masterprogram i teatervetenskap och performance studies

120.0 Higher Education Credits
120.0 ECTS credits

Programme code: HMTVP
Valid from: Autumn 2022
Date of approval: 2021-09-24
Department: Department of Culture and Aesthetics

Decision

Prerequisites and special admittance requirements

Bachelor's degree in humanities or social sciences, including a degree project of at least 10 credits. English 6 or equivalent.

Programme structure

The performing arts are today more and more operating on a global and international level. Due to these developments professional fields related to theatre are changing and require intercultural knowledge and specific skills to be able to cope with project related and curational challenges. The Master programme is responding to this situation and will provide students with competences and skills that are important to their professional future. At the same time the study programme will expand their understanding of theatre and provide advanced theories and methods for the in- depth analysis of international contemporary and historical performance practices. Students graduating from the study programme will be able to work in the fields of theatre, festivals, cultural institutions and they will be well prepared to follow more expanded research in the academic field. This double bind of professional aspects and advanced research qualifications offers the students a profound basis for their professional career.

At the centre of teaching methods and didactics is the concept of supervised project work (both in research and practice) that demands from the students to engage in autonomous and group steered activities to foster their independent thinking, self-organization skills and creativity.

We have a close cooperation with the department of theatre studies at University of Amsterdam (UvA). Our students have the opportunity to take part in a study exchange of one semester in the Master programme "International Dramaturgy" at UvA (outgoing, fall, year 2). Our students will also take part in the Winter School at UvA, our teachers/professors will contribute to the teaching there. Students from Amsterdam will come to Stockholm either for an internship or for one semester (incoming, fall, year 1).

The master's program comprises four semesters of full-time studies (120 credits) and consists of both obligatory and elective courses. A semester normally consists of four courses of 7.5 credits each. The master's thesis occupies one semester (30 credits). Teaching is in English. Students who have a bachelor's degree in theater studies will during semester 1 read an elective course 7.5 credits in the main area of theatre- and performance studies, while other students study the course Introduction to performance studies, 7.5 credits. Elective courses outside the main area of theatre- and performance studies must be chosen in consultation with the director of studies.

Goals

To acquire a MA degree students must

-demonstrate knowledge and understanding in the discipline, concerning both a wider knowledge in the field and a deeper knowledge in specific sections of the field inclusive of knowledge on recent research and development.

-demonstrate deeper methodological competences in the discipline

-demonstrate the capacity to integrate knowledge systematically and critically and to analyse, evaluate and investigate complex objects of study and scholarly problems even with limited information

-demonstrate skills in critically, independently and creatively identifying and formulating theses, to plan and execute qualified tasks with adequate methods in a given timeframe and therefore to contribute to the
